

FLOORING FOR SPORTS AND MULTI-PURPOSE HALLS.

*Top-level  
performance  
and aesthetics.*

# Swiss quality – from a single source.

## A PROVEN PARTNER.

CONICA has been implementing first-class flooring systems for indoor and outdoor applications all over the world for many years. This means we have a thorough understanding of the requirements of the global market, demonstrated by our many years of expertise and products of the highest quality. At CONICA, everything from a single source means just that, with a wide range of individually tailored solutions available, from single product components to complete systems. CONICA provides its customers with ongoing support throughout the entire duration of a project – from consultation, ordering and delivery all the way through to on-site support during construction and technical after-sales services.

## TRACING THE DIFFERENCE TO THE SOURCE.

CONICA was founded in 1977 and represents typical Swiss values such as precision, perfection and reliability. All production is based in Schaffhausen, meaning CONICA is able to guarantee consistently high quality on a global scale at all times. Continuous research and development work ensures our products are state of the art and meet all international standards and inspection criteria. Here at CONICA, as a company certified in accordance with the ISO 9001 and ISO 14001 standards, we attach great importance to sustainability – this involves not only the environmentally sustainable production of synthetic flooring but also its durability.

CONICA AG, Schaffhausen, Switzerland

# Top performance in any environment.

## LEADING THE WAY IN MANY AREAS.

CONICA is the ideal partner for first-class system solutions in sports, recreational and industrial flooring. Our expertise is backed up by a large number of international references – the best guarantee our partners could wish for that we offer the most innovative, reliable and environmentally friendly flooring systems. In the sports segment, CONICA has been a world-leading provider of track surfaces for almost 40 years. These surfaces employ innovative technologies and top-quality materials, and also form the basis for the success of our system solutions for sports and multi-purpose halls.

## USING YOUR HOME ADVANTAGE.

Our flooring for sports and multi-purpose halls offers customizable mechanical properties – whether in terms of toughness, elasticity or stretching, CONICA can provide the right hall flooring solution for every kind of sport. Furthermore, almost any colour combination is possible. CONICA relies on polyurethane, which offers a wide range of advantages in comparison to other materials. Polyurethane floors reduce the risk of injury to athletes, protect people's joints and also provide a secure footing. CONICA also offers systems with low emissions and high fire classification.

Flooring from CONICA for sports and multi-purpose halls ensures optimum resistance and a long lifespan. Care and maintenance are also made easier, since the flooring can be installed seamlessly over large areas. In fact, there are eight compelling reasons to choose this flooring solution.

## PROTECTION

CONICA sports flooring systems are easy on athletes' joints, provide a secure footing and thus help to minimise the risk of injury.

## VARYING ELASTICITY

From point-elastic and mixed-elastic to surface-elastic and combined-elastic systems, we can provide the ideal solution to meet all requirements on an individual basis.

## SEAMLESS

The seamless high-performance plastic has no weak points that might be susceptible to damage. It is easy to clean and ensures low maintenance costs.

## LOW EMISSIONS

CONICA sports flooring systems do not contain any softeners, aldehyde or PCP and are practically solvent-free. Various test reports have verified the low emissions rates across the entire system-design process.

## FIRE CLASSIFICATION

CONICA's specially developed polyurethane formulations offer the highest possible fire classification (material class: flame-retardant) in all sports flooring systems.

## COST

CONICA sports flooring systems offer high cost efficiency, not least thanks to their long overall lifespan of approximately 20 years.

## EFFICIENT REPAIRS

The PU sports flooring systems can be repaired efficiently by retopping. Combined with the system's long lifespan, this ensures a positive life-cycle assessment.

## DESIGN

CONICA sports flooring offers an extensive range of standard and special colour options, which include single-coloured and multicoloured surfaces with decorative elements.

# Much more than just a playing surface.

BBC Arena, Schaffhausen, Switzerland

### **SOLUTIONS FOR EVERY SPACE.**

CONICA's expertise in flooring solutions extends far beyond the boundaries of the sports hall. In addition to the playing-fields our product range includes solutions for many more areas and spaces.

From entrance halls to changing facilities and wet rooms – when it comes to resistance, functionality and creative freedom, CONICA flooring has everything covered. Whatever the requirement for a particular flooring surface, CONICA has the solution and is able to deliver the perfect foundation for your project.

Officially certified:

# Colour and decoration on demand.

## **AN EXTENSIVE RANGE OF COLOURS FOR A UNIQUE SPORTING EVENT.**

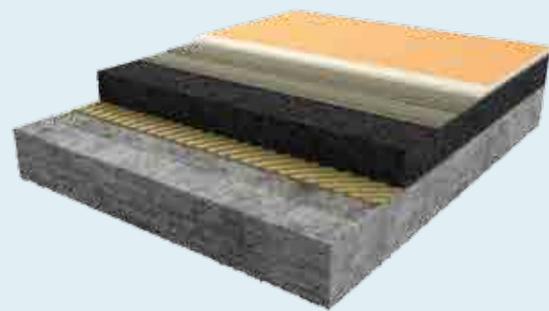

The CONICA sealing-lacquer colour range offers 24 standard colour options, allowing you to be as creative as you like. Not only can you design the architectural features of an entire sports or multi-purpose hall, you can also reflect the identity of a team, sponsor or brand.

CONICA's polyurethane flooring can be used for virtually any colour scheme – no other material offers more creative freedom in terms of colours.

# Four system solutions covering any requirement.

## HG

### CONIPUR HG

Point-elastic sports flooring system. Absorbs impact forces directly through its flexible surface. System options cover a range of requirements (practically emissions-free, high fire classification, high level of mechanical resistance). Perfect sports flooring for virtually all applications.

**Standards** EN 14904, DIN 18032-2, AgBB, EN 13501-1

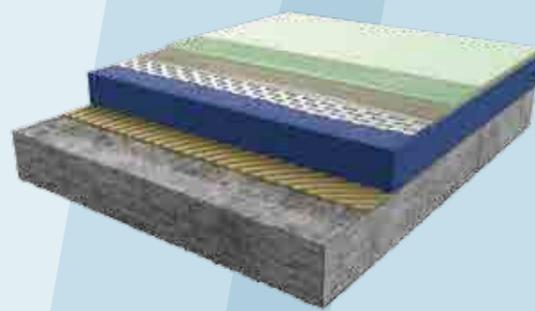

**Target groups** Particularly children and young people, but also adults

**Areas of application** Multi-purpose use, ball sports, gymnastics, martial arts

Point elasticity

## KF

### CONIPUR KF

Mixed-elastic sports flooring system. A soft coating combined with a surface-hardening strong matrix ensure high levels of force reduction and secure footing for athletes. System options cover low emissions and high fire classification.

**Standards** EN 14904, DIN 18032-2, AgBB, EN 13501-1

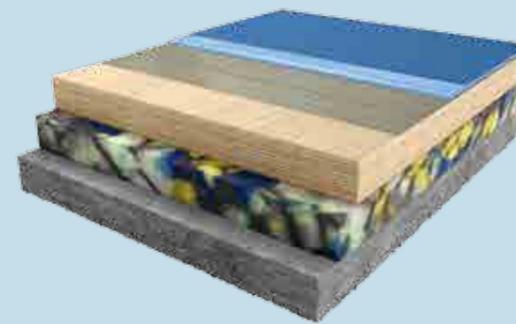

**Target groups** Adults, children and young people

**Areas of application** Multi-purpose use, ball sports, gymnastics

Mixed elasticity

## AE

### CONIPUR AE

Area-elastic sports flooring system with flexurally rigid surface. Higher levels of force reduction compared to point- and mixed-elastic systems. Specific system options ensure low emissions and high fire classification.

**Standards** EN 14904, AgBB, EN 13501-1

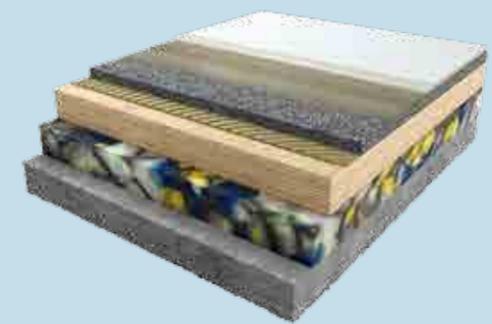

**Target groups** Adults

**Areas of application** Multi-purpose use, ball sports, gymnastics, wheelchair sports, roller hockey, aerobics

Area elasticity

## CE

### CONIPUR CE

Combined-elastic sports flooring. Combines a point-elastic top coating with a surface-elastic substructure. Ideal combination of the benefits of point- and surface-elastic systems. Virtually unrestricted multi-purpose use. System options cover a range of requirements (practically emissions-free, high fire classification, high mechanical resistance).

**Standards** EN 14904, AgBB, EN 13501-1

**Target groups** Adults, children and young people

**Areas of application** Multi-purpose use, ball sports, gymnastics, aerobics

Combined elasticity
